

WIRELESS OCCUPANCY SENSOR

| Extended Coverage

APPLICATION

The Wireless Occupancy Sensor detects human presence or motion in an indoor area. It operates on Passive Infrared (PIR) technology to detect human presence This sensor transmits this occupancy data over a secure wireless connection to the Wireless Analog controller and Gateway. Parameters of the occupancy sensor such as timeout interval and controller mapping are easily configurable through an app.

The Wireless Occupancy sensor is designed to work as a part of the Honeywell Zone Based Smart Cooling Solution.
