REAL-TIME DETECTION ENSURES BETTER SAFETY

Engineered to send you quick alerts
and help minimize damage

Your premises deserve the highest safety. The wireless smoke detector is designed to help you protect your space, even when you are away. It is powered by photoelectric technology to sense smoke at an early stage and alert you by sending real-time notifications on your mobile through the Impact app. These convenient features make the proactive, intelligent device a smart choice for safer spaces.

HOW IT WORKS

The wireless smoke detector monitors your premises 24X7, and sends notifications or calls to your phone through a mobile app.

A USER-FRIENDLY SYSTEM FOR 24/7 MONITORING

Connects to your existing smart security system effortlessly

Keeping your small commercial unit, retail outlet or residential premises safe is now easier. Unlike traditional fire security systems that have been wired and more suited to larger premises, the new independent, battery-powered solution helps protect smaller spaces. Once installed, the wireless smoke detector requires no human intervention and sends maintenance alerts remotely on a mobile app, making it highly convenient.

EASY-TO-USE MOBILE APP

The wireless smoke detector is easy to access, thanks to Impact, a dedicated Honeywell mobile app. It sends alarm notifications/calls to your phone even while you're away from your premises. Equipped with advanced features, it enables 24x7 monitoring.
