

# N05, N10 SERIES

## NON-SPRING RETURN DIRECT-COUPLED DAMPER ACTUATORS FOR MODULATING AND FLOATING CONTROL

- Declutch for manual adjustment
- Adjustable mechanical end limits
- Removable access cover for direct wiring
- Mountable in any orientation
- Function selection switch for selecting modulating or floating/2-position control

### GENERAL

This non-spring return direct-coupled damper actuator provides modulating and floating/2-position control for:

- air dampers,
- VAV units,
- air handlers,
- ventilation flaps,
- louvers, and
- reliable control for air damper applications with up to 10 sq ft / 44 lb-in. (5 Nm) and 20 sq ft / 88 lb-in. (10 Nm)(seal- less damper blades; air friction-dependent).

#### Technical Specification

Supply voltage	24 Vac/dc $\pm 15\%$ , 50/60 Hz; z;
Nominal voltage	24 Vac/dc, 50/60 H

All values stated hereinafter apply to operation under nominal voltage conditions.

#### Power consumption

CN7505	5 VA / 2 W
CN7510	5 VA / 2 W

#### Control signal

Ambient operating limits	-5...+140 °F (20...+60 °C)
Ambient storage limits	-22...+176 °F (-30...+80 °C)
Relative humidity	5...95%, non-condensing
Modulating	(0)2...10 Vdc
Floating/ 2-Position	-22...+176 °F (-30...+80 °C)

#### Safety

Protection standard	IP54
Protection class	II as per EN 60730-1
Overvoltage category	II

#### Lifetime

Full strokes	60000
Repositions	1.5 million

#### Mounting

Round damper shaft	3/8 in...5/8 in.
Square damper shaft	1/4 in...1/2 in.; 45° steps
Shaft length	min. 1-5/8 in.

### End switches (when included)

Rating	Class II
Triggering points	5° / 85°
Torque rating	44 lb-in. (5Nm) / 88 lb-in. (10Nm)
Rotation stroke	95° + 3°
Dimensions	see "Dimensions" on page 7
Weight (without cables)	1.0 lbs.
Noise rating	35 dB(A) max. at 1 m

### Legend for Fig. 1:

- 1) ) Universal shaft adapter
- 2) ) Mechanical end limits (manually adjustable)
- 3) ) Declutch button
- 4) ) Function selection switch
- 5) ) Removable access cover
- 6) ) Anti-rotation bracket

### Contents of Package

The delivery package includes the actuator, parts 1 through 6 (see Fig. 1), plus two cable grommets and a spare cable grommet.

### RUN MODES

The function selection switch (see Fig. 2) can be used to place the actuator into any one of two different modes:

- Service/Off; or
- the floating/2-position run mode ("Dir" for CCW-closing dampers or "Rev" for CW-closing dampers).
- the modulating run mode.

Fig. 2. Function selection switch

### Power-Off Behavior

If power is removed, the shaft adapter remains in position.

### Service/Off

If the function selection switch is set to the "Service/Off" position, then all rotary movement is cancelled, and all control signals are ignored, thus allowing the actuator to be manually operated safely.

### Floating/2-Position Run Mode

#### Without Feedback Signal

If, however, the function selection switch has been set to one of the two floating/2-position control settings - but the actuator has not been wired for a feedback signal (see Fig. 12 and Fig. 13) - then as soon as operating power is applied, the shaft adapter will run according to the control signals applied.

#### With Feedback Signal

If the function selection switch has been set to one of the two floating/2-position control settings - and if the actuator has been wired for a feedback signal (see Fig. 12 and Fig. 13) - then as soon as operating power is applied, the shaft adapter will likewise run first completely counterclockwise and then completely clockwise (see also section "Adaption"), after which it will run according to the control signals applied.

#### Modulating Run Mode

If the function selection switch has been set to one of the four modulating control settings - and if the actuator is wired correspondingly (see Fig. 10) - then as soon as operating power is applied, the shaft adapter will run first completely counterclockwise and then completely clockwise (see also section "Adaption"), after which it will run according to the control signals applied.

## PRODUCT IDENTIFICATION SYSTEM

## BASIC FEATURES

Fig. 1. Setting units and control elements

Table 1 describes, for the floating mode, the shaft adapter behavior ("stops," rotates "CCW," or rotates "CW") in dependence upon the control signals applied to terminals 3 and 4 and upon the function selection switch setting.

Table 2 describes, for the 2-position mode, the shaft adapter behavior ("stops," rotates "CCW," or rotates "CW") in dependence upon the control signals applied to terminals 3 and 4 and upon the function selection switch setting.

Table 3 describes, for the modulating mode, the shaft adapter behavior ("stops," rotates "totally CCW," rotates "totally CW," runs to "proportional" position, or runs to "50%" of max. stroke) in dependence upon the control signals applied to terminals 3 and 4 and upon the function selection switch setting.

**Table 1. Shaft adapter behavior in the floating mode**

control signal at		Function selection switch settings				
Terminal 3	term 4	2...10V	0...10V /Dir	Service / Off	10...0V /Rev	10...2 V
open	open	stops	stops	stops	stops	stops
open	24Vac/dc	CCW	stops	stops	CW	CW
24Vac/dc	open	CW	stops	stops	CCW	CCW

**Table 2. Shaft adapter behavior in the 2-position mode**

control signal at		Function selection switch settings				
Terminal 3	term 4	2...10V	0...10V /Dir	Service / Off	10...0V /Rev	10...2 V
24 Vac/dc	open	CW	CW	stops	CCW	CCW
24 Vac/dc	24Vac/dc	CCW	CCW	stops	CW	CW

**Table 3. Shaft adapter behavior in the modulating mode**

control signal at		Function selection switch settings				
Terminal 3	term 4	2...10V	0...10V /Dir	Service / Off	0...10V /Rev	10...2 V
Open	open	totally CCW	--	stops	--	totally CCW
	24Vac/dc	0% (most left)	--	stops	--	0% (mostright)
< min. control signal plus 0.24V	open	totally CCW	--	stops	--	totally CW
	24Vac/dc	0% (most left)	--	stops	--	0% (most right)
between min. control signal plus 0.24V and max. control signal minus 0.24V	open	proportional	--	stops	--	proportional
	24Vac/dc	0% (most left)	--	stops	--	0% (most right)
> max. control signal minus 0.24V	open	totally CW	--	stops	--	totally CCW
	24Vac/dc	0% (most left)	--	stops	--	0% (most right)

**Fig 3. Final shaft adapter position in dependence upon control signal (example function selection switch setting of 0...10 V)**

**Fig 4. Feedback signal in dependence upon current position of shaft adapter (example function selection switch setting of 0...10 V)**

## Adaption

Adaption is a function in which the actuator re-maps its feedback signal and control signal in accordance with repositioned mechanical end limits (see also Fig. 6) and thus recognizes their new positions

**Fig 5. Adaption (function selection switch set to 0...10 V)**

Adaption will be carried out whenever the actuator is in the modulating mode or the floating plus feedback mode or the 2- position plus feedback mode and

- the user powers up (from a totally powerless condition) the actuator; or
- the user sets the function selection switch to the "Service/Off" setting for at least 2 seconds and then back to its previous setting; or
- the control signal's value rises up into the upper dead band (i.e. to more than the max. control signal minus 0.24 V) or drops down into the lower dead band (i.e. to less than the min. control signal plus 0.24 V), after which the shaft adapter must then remain at the respective (upper or lower) mechanical end limit for at least 3 seconds. However, in this case, the actuator will then recognize the position of only the respective (upper or lower) mechanical end limit.

## Overriding

An override is a condition in which a 24 V signal is applied to terminal 4 of an actuator in the modulating mode, thus causing the actuator to ignore the control signal at terminal 3, whereupon it will instead move to a position of 50% of its maximum stroke (see Table 3).

## Feedback

If correspondingly wired (see Fig. 10, Fig. 11 and Fig. 12), the actuator provides, via terminal 5, a feedback signal proportional to the actual position of the shaft adapter.

# MANUAL ADJUSTMENT

## IMPORTANT

*To prevent equipment damage, you must remove power or set the function selection switch to the "Service/Off" position before manual adjustment.*

After removing power or setting the function selection switch to the "Service/Off" position, the gear train can be disengaged using the declutch button, permitting the shaft adapter to be manually rotated to any position. If you have wired the actuator for feedback signal, then, after adaption, the feedback signal will follow the new position.

### Limitation of Rotation Stroke

Two adjustable mechanical end limits are provided to limit the angle of rotation as desired (see Fig. 7). The mechanical end limits must be securely fastened in place.

**Fig 6. Mechanical end limits**

To ensure tight closing of the dampers, the shaft adapter has a total rotation stroke of 95°.

After adjusting the mechanical end limits, the user should trigger adaption (see section "Adaption").

### INTERNAL END SWITCHES

The internal end switches "A" and "B" are changeover switches which are activated when the shaft adapter moves past a position of 5° and 85°, respectively (see also Table 5).

**Fig 7. Internal end switch triggering points**

## INSTALLATION

### ⚠ CAUTION

**To avoid personal injury (electrical shock) and to prevent equipment damage, before installation, you must remove power.**

These actuators are designed for single-point mounting.

### Mounting Instructions

All information and steps are included in the Installation Instructions (Product Literature No. 62-0224) supplied with each actuator.

### Mounting Position

The actuators can be mounted in any position (IP54 is dependent upon orientation; see Fig. 9). Choose a mounting position permitting easy access to cables and controls.

**Fig 8. Mounting for IP54**

**NOTE:** Further, in order to guarantee IP54, only original Honeywell grommets may be used.

### Anti-Rotation Bracket and Screws

If the actuator is to be mounted directly on a damper shaft, use the anti-rotation bracket and screws included in the delivery package. The min. distance between the center of the damper shaft and the middle of the anti-rotation bracket is 3.35 in.; a max. of 4.25 in. is allowed (see also Fig 14).

Depending upon the specifics of your mounting site, the actuator may shift in position slightly while tightening the screws at the top of the shaft adapter. The anti-rotation bracket features a T-piece with a 5-mm-long shank to accommodate for this movement. It is important to ensure that this play is not impeded.

### Universal Shaft Adapter

The universal shaft adapter can be used for shafts of various diameters and shapes (round: 3/8...5/8 in. and square: 1/4...1/2 in.).

# WIRING

## CAUTION

To avoid personal injury (electrical shock) and to prevent equipment damage, before wiring, you must remove power.

### Access Cover

#### IMPORTANT

Once the access cover has been removed, please take care to avoid damaging any of the parts now accessible.

The access cover can be unscrewed and removed in order to gain access to the terminal block(s) and perform wiring.

Fig 9. Access Cover

Fig. 2. End switches

NOTE: Both of the internal end switches must be connected to the same power source.  
Table 4 and Table 5 summarize the information presented in the preceding wiring diagrams.

**Table 4. Signals at terminals**

terminal	mode		
	modulating	floating	2-position
1	24 V ~/+ (power)	unused or (with feedback) 24 V ~/+ (power)	unused or (with feedback) 24 V ~/+ (power)
2	common ~/-	common ~/-	common ~/-
3	0[2]...10 V (control)	24 V ~/+ (control signal)	24 V ~/+ (control signal)
4	24 V ~/+ (override)	24 V ~/+ (control signal)	24 V ~/+ (control signal)
5	0[2]...10 V (feedback)	unused or (with feedback) 0...10 V	unused or (with feedback) 0...10 V
NOTE: All cables connected to these terminals must be equipped with spark suppression.			

**Table 5. Internal end switches**

terminal	type of switch
S1	common lead for switches A and B
S2, S3	change-over switch A (S1/S2 opens and S1/S3 closes when shaft adapter moves CW past 5°; reverts to original state when shaft adapter moves CCW past 5°).
S5, S6	change-over switch B (S1/S5 opens and S1/S6 closes when shaft adapter moves CW past 85°; reverts to original state when shaft adapter moves CCW past 85°).
